Sometimes when
people get an illness
like cancer the
Doctors cannot make
them better.

Palliative care is about
making the last part
of your life as good as
it can be.

Palliative care helps with all parts of your life. It cares about the whole person.

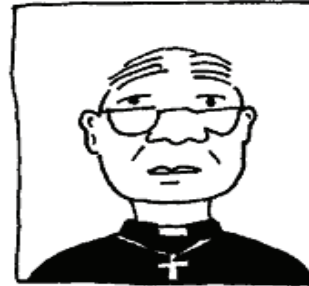

Thinking about your life and the things you want to do.

Palliative care may help with:

Stopping or making your pain less.

Thinking about your spiritual needs.

Stopping other symptoms like feeling sick.

Coping with your sadness and feelings you have about dying.
