Sometimes when  
people get an illness  
like cancer the  
Doctors cannot make  
them better.

Palliative care is about  
making the last part  
of your life as good as  
it can be.

Palliative care helps with all parts of your life. It cares about the whole person.

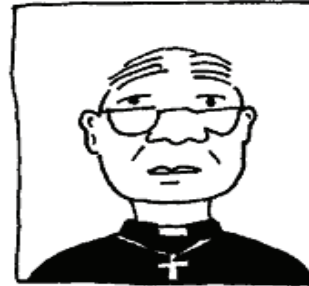

Thinking about your life and the things you want to do.

### Palliative care may help with:

Stopping or making your pain less.

Thinking about your spiritual needs.

Stopping other symptoms like feeling sick.

Coping with your sadness and feelings you have about dying.
